PROBLEM STATEMENT

Existing Challenges

Women often purchase cosmetic products based on advertisements, trends, or celebrity recommendations without considering their individual skin type or allergies.

Users may start using medicines without being aware of possible allergic reactions or important precautions related to their personal health profile.

Existing menstrual tracking applications mainly predict period dates but provide limited personalized wellness guidance.

Women with conditions such as PCOS require customized lifestyle recommendations that many current applications do not adequately provide.

Personal health information is scattered across multiple applications instead of being integrated into a single intelligent platform.

Why is this Important?

- Promotes informed decisions before using cosmetics or medicines.
- Reduces the risk of allergic reactions through personalized ingredient analysis.
- Encourages healthier lifestyle choices during different menstrual phases.
- Provides AI-powered recommendations tailored to each user's health profile.
- Saves time by combining multiple wellness services into one application.
- Supports preventive healthcare and improves women's overall well-being.

Stakeholders

Women users: Use the app for personalized wellness guidance.

Healthcare professionals: provide reliable health and wellness recommendations.

Dermatologists: Support skincare and cosmetic ingredient analysis.

Gynecologists: Contribute menstrual health and reproductive wellness expertise.

Nutritionists and fitness experts: Help design personalized diet and exercise recommendations.

Admin: Develop, maintain and update the application.

PROPOSED SOLUTION

HerBalance AI

HerBalance AI is a smart women's wellness companion that securely stores each user's personal health profile and delivers personalized recommendations using Artificial Intelligence.

Key Features

- Personal health profile management
- AI-based cosmetic ingredient analysis
- Medicine precaution and compatibility guidance
- Menstrual cycle tracking with reminders
- Personalized food recommendations
- Exercise suggestions based on menstrual phase and body profile
- AI-powered wellness assistant for everyday health queries

TOOLS USED

Flutter, Dart, Python, Flask (or FastAPI), Firebase (or MongoDB), Google Gemini API, Google ML Kit (or Tesseract OCR), OpenCV, Visual Studio Code, Git, GitHub.

BENEFITS AND IMPACTS

- Personalized health and skincare guidance
- AI based cosmetic and medicine analysis
- Menstrual cycle tracking and reminders
- Customized diet and exercise recommendations
- All-in-one women's wellness companion
- Improves quality of life through AI assistance
